Executive summary

example.test

GDPR/ePrivacy findings posture

Completed: 20 Oct 2026, 12:00 UTC | Region: EU-IR

Site assessment

GDPR/ePrivacy | Elevated Review Priority

This assessment needs work, with "Tracking before a recorded consent choice" the first area to review. An analytics cookie and a metrics request were retained before a recorded consent choice. Review the retained vendor requests and gate non-essential activity until a choice is recorded. Also review "Cookie disclosure requires review" and "Cookie security attributes need review".

CertScore.ai score

Starting-page score

Findings by severity

Retained findings

High / critical	4
Medium	1
Low / review	0

Priority findings and next actions

1. Tracking before a recorded consent choice — A

Review the retained vendor requests and gate non-essential activity until a choice is recorded.

2. Cookie disclosure requires review — C

Compare retained cookie names with the published cookie notice and update the relevant disclosure.

3. Cookie security attributes need review — B

Review the retained cookie attributes and verify the appropriate security settings.

Overview | Fixes | Evidence | Sources

01 Topic overview

CMP checks	First-layer choices observed	CMP provider
13	3 / 3	OneTrust

13 retained checks: 3 observed / 10 limited

02 Fixes and verification

A1. Tracking before a recorded consent choice [High]

An analytics cookie and a metrics request were retained before a recorded consent choice.

Where to investigate

https://example.test/

cookies: _example

domains: example.test

What to change / review

1. Locate the initiating script, tag-manager trigger or embed for each retained pre-consent request.

2. For activity confirmed to require consent, prevent the integration from loading or firing until the relevant affirmative choice is registered. Check both hard-coded scripts and tag-manager rules.

3. Retest fresh sessions before a choice, after Reject and after Accept; compare the cited request endpoints and cookie/storage activity.

How to verify

Retest the affected page in fresh browser sessions using the same region. Check control visibility, the saved choice and resulting requests/storage separately before a choice, after Reject and after Accept. Compare with the cited evidence.

Privacy-policy link reachable before consent interaction	Not assessed	Not retained
Consent storage observed	Not assessed	Not retained
Activity after Accept / Reject	Partially assessed	cmp:activity:1
CMP cookie expiry	Not assessed	Not retained
CMP cookie declarations compared with pre-consent capture	Not assessed	Not retained
Unmatched cookie names	Not assessed	Not retained
Information about cookies available (e.g., storage duration)	Observed	cmp:declarations:1

Cookie banner available

Result: Observed. Consent surface observed on the initial visit.

Evidence references: consentControlAssessment.surface

Option to reject cookies available

Result: Observed. First-layer Reject or equivalent refusal control.

Evidence references: consentControlAssessment.controls.reject

Appendix A: Consent management (continued)

03 Detailed evidence

Accept / Reject prominence comparison

Result: Not assessed. No verified evidence retained for this check.
Evidence references: Not retained

Privacy choices available

Result: Partially assessed. Captured categories and privacy-choice settings.

Captured category settings

Category	Captured setting
Strictly necessary	On
Analytics	Off
Marketing	Off

Privacy choice	Availability	Captured setting
Analytics consent	Enabled	Off

Evidence references: cmp:preferences:1

Individual services identified in the CMP

Result: Partially assessed. Named services in the retained CMP inventory.

CMP service	Identification source	Evidence reference
Example Analytics	CMP api inventory	cmp:services:1

Evidence references: cmp:services:1

Link to privacy policy available

Result: Not assessed. Sufficient verified evidence for this criterion was not retained in this scan.
Evidence references: Not retained

Privacy-policy link reachable before consent interaction

Result: Not assessed. No verified evidence retained for this check.
Evidence references: Not retained

Consent storage observed

Result: Not assessed. No verified evidence retained for this check.
Evidence references: Not retained

Appendix A: Consent management (continued)

03 Detailed evidence

Activity after Accept / Reject

Result: Partially assessed. Activity in the retained choice window.

Requests in the retained choice windows

After reject: 8 second capture; 2 total requests; 1 non-essential; 1 request records retained.

Service / purpose	Request host and path	Time after click / classification
Example Analytics; Analytics	metrics.example.test/collect	+750 ms; Non-essential

Evidence references: cmp:activity:1

CMP cookie expiry

Result: Not assessed. No verified evidence retained for this check.
Evidence references: Not retained

CMP cookie declarations compared with pre-consent capture

Result: Not assessed. No verified evidence retained for this check.
Evidence references: Not retained

Unmatched cookie names

Result: Not assessed. No verified evidence retained for this check.
Evidence references: Not retained

Information about cookies available (e.g., storage duration)

Result: Observed. Cookie descriptions captured from the CMP.

Cookie / pattern	CMP-stated purpose	CMP-stated retention / observed expiry
retained_cookie_1	Audience measurement	30 days
retained_cookie_2	Audience measurement	30 days
retained_cookie_3	Audience measurement	30 days
retained_cookie_4	Audience measurement	30 days
retained_cookie_5	Audience measurement	30 days
retained_cookie_6	Audience measurement	30 days

example.test | GDPR/ePrivacy | Appendix B

Overview | Fixes | Evidence | Sources

01 Topic overview

Cookie rows	Local / session storage rows	Retained domains
1	0	1

02 Fixes and verification

B1. Cookie security attributes need review [High]

The retained scan flags cookie security attributes for review.

Where to investigate

https://example.test/

cookies: _example

domains: example.test

What to change / review

1. Use the retained cookie name, domain and path to locate the responsible Set-Cookie response or client-side cookie writer.

2. For cookies that should only travel over HTTPS, set Secure at the source. For cookies that do not need JavaScript access, set HttpOnly on the server response.

3. Choose SameSite for the actual cross-site use case; test login, embedded content and redirects before publishing the change. SameSite=None requires Secure.

4. Inspect the new response and stored cookie in a fresh browser session, including duplicate cookies on other domains or paths.

How to verify

In browser developer tools, inspect Application storage and Network responses for the listed cookie names, domains, paths and storage keys. Retest in fresh sessions before and after the relevant consent choice; confirm the intended attributes, lifetime and write timing.

Evidence / workpaper references: weak_cookie_security_attributes, cookie:_example:initial

03 Detailed evidence

Cookie and storage purposes

Appendix B: Cookies and similar technologies (continued)

03 Detailed evidence

Evidence: Cookie security attributes

Review signal. The retained _example cookie was set without Secure.

Retained evidence	Detail
Cookie name	_example
Domain	example.test
Path	/
Secure	No

Evidence references: cookie:_example:initial

Finding evidence: Cookie security attributes need review

Evidence type	Retained detail
Affected page	https://example.test/
Cookies	_example
Domains	example.test

Cookie and storage inventory

Observed evidence from the bounded scan only.

Inventory summary: 1 retained cookies; 0 localStorage / sessionStorage rows. Service and domain observations are in Appendix F.

1. Cookie - Example Analytics

Purpose: Analytics | Evidence: Non-essential | Category: Analytics | Priority: High | Confidence: High
Observed: 1.25s after scan start | Pre-consent: Yes | Party: First Party | Site relationship: Same Site | Entity relationship: Same Entity
Name(s): _example | Domain(s): example.test
Observed records: 1; requests: 1; set by third-party script: No; timing basis: Before Consent Cookie Write
Attribution: example_analytics
Regulatory relevance: analytics

Appendix C: Privacy policy

example.test | GDPR/ePrivacy | Appendix C

Overview | Fixes | Evidence | Sources

01 Topic overview

Disclosure checks	Retained policy source URLs	Retained policy passages
1	1	1

1 retained checks: 1 observed

02 Fixes and verification

C1. Cookie disclosure requires review [High]

The retained scan flags cookie disclosure for review.

Where to investigate

https://example.test/

cookies: _example

domains: example.test

What to change / review

1. Match the retained cookie names and domains to their owning tags or services and confirm their purposes and lifetimes.
2. Have the privacy owner review the corresponding notice entries. Update confirmed omissions in the published notice and CMP declaration inventory, or remove the unwanted integration.
3. Compare a fresh cookie inventory with the revised notice, including cookies set after the relevant visitor choices.

How to verify

Open the revised policy from the scanned page, verify the exact section and links, and compare each statement with the site's actual processing. Have the privacy owner approve the wording, then rescan and retain the revised URL and excerpt.

Evidence / workpaper references: cookie_disclosure_gap

03 Detailed evidence

Evidence: Controller contact disclosure

Observed. Contact details in the retained privacy notice.

Retained evidence	Detail
Selected policy section excerpt	For questions about personal data, contact the controller at privacy@example.test.
Source URL	https://example.test/privacy

Evidence references: policy:notice:1

Appendix C: Privacy policy (continued)

Appendix E: Webserver security

example.test | GDPR/ePrivacy | Appendix E

Overview | Fixes | Evidence | Sources

01 Topic overview

CMS platforms	Plugins	Connection checks
1	Not retained	0

02 Fixes and verification

E1. Drupal 7 community security support ended [Advisory Review]

Drupal Association and Drupal Security Team support ended. Paid or third-party extended security support and independently maintained patches are not observable.

Where to investigate

Matched version range: >= 7.0.0 < 8.0.0

Vendor fixed versions: Not retained

What to change / review

1. Confirm the deployed version against the retained declaration and vendor advisory.
2. Apply the vendor's supported update or mitigation, then verify the deployed version and affected behavior.

Implementation reference: https://www.drupal.org/psa-2023-06-07

How to verify

Verify the deployed server/CMS configuration and versions, then repeat the cited connection or advisory check against the same URL. Confirm redirects and page resources behave as intended and retain the resulting response evidence.

Evidence / workpaper references: site_integrity:lifecycle:0, site_integrity:cms:0

Appendix E: Webserver security (continued)

03 Detailed evidence

CMS, versions and plugins

Platform	Retained version	Identification evidence
Drupal	7.98	site_integrity:dom:0; declared; declared_exact; confidence high; observed versions 7.98; runtime version confirmed No

drupal-7-community-eol: Drupal 7 community security support ended. Drupal Association and Drupal Security Team support ended. Paid or third-party extended security support and independently maintained patches are not observable.
Vendor fixes: Not retained. Source: https://www.drupal.org/psa-2023-06-07. Evidence site_integrity:lifecycle:0; detection site_integrity:cms:0; confidence high; matched range >= 7.0.0 < 8.0.0.

Identification source	Retained value	Source URL / evidence
Meta generator	Drupal 7.98	https://example.test/; site_integrity:dom:0; runtime:dom:1

Captured: 2026-10-20T12:00:00.000Z; source hash: aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa; evidence: runtime:cms.
Bounded starting-page transport evidence only. Missing evidence remains unknown; these checks do not establish complete server security.
No persisted transport checklist rows were retained for this topic.

Open retained technical workpaper (JSON)

Appendix G: TLS

example.test | GDPR/ePrivacy | Appendix G

Overview | Fixes | Evidence | Sources

01 Topic overview

TLS checklist rows	Projected findings	Evidence scope
1	1	Starting page

1 retained checks: 1 to review

02 Fixes and verification

G1. TLS certificate chain requires review [Medium]

The retained HTTPS probe could not validate the certificate chain served by example.test.

Where to investigate
https://example.test/

What to change / review
1. Identify which public endpoint terminates TLS for the affected hostname: CDN, load balancer or web server.

2. Check the served certificate’s hostname coverage, validity dates and intermediate chain. Replace or renew the certificate or correct the chain for the issue shown in the retained result.

3. Install the corrected certificate at the TLS termination point and verify each affected hostname. Confirm automatic renewal is configured and monitored.

How to verify
Check the affected hostname in a browser security panel and a TLS validation tool. Verify hostname coverage, expiry and the served certificate chain; repeat the request after deployment and confirm validation succeeds.

Evidence / workpaper references: transport_security_tls_certificate, transport:tls:1

Appendix G: TLS (continued)

03 Detailed evidence

Evidence: TLS certificate

Gap observed. The retained probe could not validate the served certificate chain.

Retained evidence	Detail
Issuer	Example Certificate Authority
Valid to	2027-08-24T00:00:00Z
Valid TLS certificate	No
TLS probe error message	Unable to verify the first certificate in the served chain.

Evidence references: transport:tls:1

Bounded starting-page transport evidence only. Missing evidence remains unknown; these checks do not establish complete server security.

1. Valid SSL/TLS certificate: Gap observed

The retained probe could not validate the served certificate chain.

Assessment: Gap Observed | Evidence state: Observed | Direction: Negative Signal

04 Sources and workpaper

Scan ID: 00000000-0000-0000-0000-000000000001

Open retained technical workpaper (JSON)

Appendix H: ADA/WCAG

example.test | GDPR/ePrivacy | Appendix H

Overview | Fixes | Evidence | Sources

01 Topic overview

Failed automated rules	Affected nodes	Rules needing manual review
4	4	0

02 Fixes and verification

H1. Accessible names require review [Critical]

An image, an email field and a menu button lack accessible names. The retained help-text sample also falls below its contrast threshold.

Where to investigate
https://example.test/

What to change / review
1. Repair labels, accessible names, role/ARIA usage, and semantic structure for the retained axe examples, then rerun the accessibility scan.

How to verify
Repeat the cited check for this item using the topic verification checklist below; compare the new result with the evidence reference.

Evidence / workpaper references: semantic_labeling_accessibility_issue

H2. Images need a text alternative [Automated Rule Finding]

The team image has no alt attribute.

Where to investigate
Selector: #team-image

Observed issue: The team image has no alt attribute.

What to change / review
1. In the image component, add an alt attribute that conveys the image's purpose. Use alt="" only for a purely decorative or redundant image.

2. For an image acting as a link or button, describe the destination or action. Review the image in its page context before choosing the wording.

Implementation reference: https://dequeuniversity.com/rules/axe/4.11/image-alt

W3C implementation guidance: https://www.w3.org/WAI/tutorials/images/decision-tree/

How to verify
Rerun image-alt on the listed selectors and check that each retained failure is resolved. Complete the manual checks in the topic verification checklist.

Evidence / workpaper references: image-alt

Appendix H: ADA/WCAG (continued)

02 Fixes and verification

H3. Form fields need an accessible label [Automated Rule Finding]

The email input has no associated label or accessible name.

Where to investigate
Selector: #contact-email

Observed issue: The email input has no associated label or accessible name.

What to change / review
1. Add a visible label and connect its for attribute to the input's unique id, or use a correctly associated wrapping label.

2. If existing text supplies the label, associate it with aria-labelledby. Check that repeated components generate unique IDs and that the control has a useful accessible name.

Implementation reference: https://dequeuniversity.com/rules/axe/4.11/label

W3C implementation guidance: https://www.w3.org/WAI/tutorials/forms/labels/

How to verify
Rerun label on the listed selectors and check that each retained failure is resolved. Complete the manual checks in the topic verification checklist.

Evidence / workpaper references: label

H4. Buttons need an accessible name [Automated Rule Finding]

The icon-only menu button has no accessible name.

Where to investigate
Selector: #menu-toggle

Observed issue: The icon-only menu button has no accessible name.

What to change / review
1. Give the button a meaningful accessible name through its visible text, aria-labelledby or aria-label. Use wording that describes its action.

2. Check the browser accessibility tree, then verify keyboard focus and activation. Confirm the name and any state remain meaningful as the component changes.

Implementation reference: https://dequeuniversity.com/rules/axe/4.11/button-name

W3C implementation guidance: https://www.w3.org/WAI/ARIA/apg/patterns/button/

How to verify
Rerun button-name on the listed selectors and check that each retained failure is resolved. Complete the manual checks in the topic verification checklist.

Evidence / workpaper references: button-name

Appendix H: ADA/WCAG (continued)

02 Fixes and verification

H5. Text needs sufficient color contrast [Automated Rule Finding]

The help text has a measured contrast of 2.3:1 against a required 4.5:1.

Where to investigate

Selector: .contact-help

Observed issue: The help text has a measured contrast of 2.3:1 against a required 4.5:1.

Contrast: measured 2.3; required 4.5. Foreground #aaaaaa; background #ffffff.

What to change / review

1. Update the foreground/background color pair in the component's CSS or design token. Use the measured and required ratios in the retained evidence to identify the failing pair.

2. Measure the rendered text against its actual background after the change, including gradients, opacity and relevant UI states. Verify the applicable text-size threshold.

Implementation reference: https://dequeuniversity.com/rules/axe/4.11/color-contrast

W3C implementation guidance: https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html

How to verify

Rerun color-contrast on the listed selectors and check that each retained failure is resolved. Complete the manual checks in the topic verification checklist.

Evidence / workpaper references: color-contrast

Topic verification checklist

Rerun the cited automated rule on the affected page and selectors. Check the corrected elements manually using keyboard navigation and an appropriate assistive-technology workflow; retain the new rule result and manual test outcome.

03 Detailed evidence

Affected nodes by automated rule

Automated starting-page accessibility evidence supporting ADA/WCAG review. This is not an ADA compliance determination or a complete WCAG conformance audit. Manual review is required.

Automated audit: completed; engine axe-core 4.11.3; failed rules 4; affected nodes 4; rules needing review 0.

Assessed page: https://example.test/

Captured: 2026-10-20T12:00:05.000Z to 2026-10-20T12:00:06.000Z; document loader-runtime; evaluated rules: image-alt, label, button-name, color-contrast.

Limitations: None recorded for this bounded audit

Appendix H: ADA/WCAG (continued)

03 Detailed evidence

Automated rule evidence: image-alt

Images need a text alternative. The team image has no alt attribute.

Tags: wcag2a; impact serious; 1 affected nodes.

Guidance: https://dequeuniversity.com/rules/axe/4.11/image-alt

Affected element	Retained technical evidence
Selector	#team-image
Failure / required review	The team image has no alt attribute.
Sanitized element	<img id="team-image" src="/team.jpg">

Automated rule evidence: label

Form fields need an accessible label. The email input has no associated label or accessible name.

Tags: wcag2a; impact serious; 1 affected nodes.

Guidance: https://dequeuniversity.com/rules/axe/4.11/label

Affected element	Retained technical evidence
Selector	#contact-email
Failure / required review	The email input has no associated label or accessible name.
Sanitized element	<input id="contact-email" type="email">

Automated rule evidence: button-name

Buttons need an accessible name. The icon-only menu button has no accessible name.

Tags: wcag2a; impact serious; 1 affected nodes.

Guidance: https://dequeuniversity.com/rules/axe/4.11/button-name

Affected element	Retained technical evidence
Selector	#menu-toggle
Failure / required review	The icon-only menu button has no accessible name.
Sanitized element	<button id="menu-toggle"><svg aria-hidden="true"></svg></button>

Appendix H: ADA/WCAG (continued)

03 Detailed evidence

Automated rule evidence: color-contrast

Text needs sufficient color contrast. The help text has a measured contrast of 2.3:1 against a required 4.5:1.

Tags: wcag2a; impact serious; 1 affected nodes.

Guidance: https://dequeuniversity.com/rules/axe/4.11/color-contrast

Affected element	Retained technical evidence
Selector	.contact-help
Failure / required review	The help text has a measured contrast of 2.3:1 against a required 4.5:1.
Sanitized element	We will reply by email.
Color contrast	Foreground #aaaaaa; background #ffffff; measured 2.3:1; required 4.5:1; font 16px normal
